

Manitoba is Hiring Clinical Psychologists

Clinical Health Psychology (CHP) is excited to announce a number of full-time permanent doctoral psychologist positions, related to significant government investment to expand psychological care in the health system in Manitoba.

CHP is a provincially-led clinical service in Shared Health responsible for psychological services throughout hospitals and health centres; CHP is also an academic department in the Max Rady College of Medicine, University of Manitoba.

We offer competitive salary, comprehensive benefits, flexible start date, relocation support, clinical supervision until licensed for independent practice, ongoing professional development, professional license reimbursement; and opportunity for supervision of psychology residents, clinical teaching, and clinical research through integrated clinical/academic roles.

**Current residents/interns, beginning career and established psychologists are welcome to apply.
Applications will be reviewed as received and accepted until the positions are filled.**

Opportunities include mental health and medical areas across Child and Adult services:

WINNIPEG – Child Areas

- Transgender Health

HIGHLIGHTED POSITIONS

Bariatric Surgery Psychologist

The recently expanded **Centre for Metabolic and Bariatric Surgery** offers comprehensive pre-operative evaluation and post-operative follow up that aims to maximize patient long-term success following bariatric surgery. The psychologist will provide pre-surgical readiness assessments, pre- and post-surgery psychological intervention, with opportunity for program development and evaluation.

Cardiac Psychologist

Cardiac Sciences Manitoba, consistently in the top national CIHI ratings for quality of care, provides coordinated cardiology and surgery services, and links to cardiac rehabilitation in the community. The psychologist will provide outpatient assessment and treatment for patients with cardiac diagnoses through the cardiac specialty clinics, as well as inpatient consult, and opportunity for service development.

Pain Psychologist

The **Manitoba Pain Care Program** is a multi-disciplinary, multi-site 'hub-and-spoke' provincial service committed to evidence-based, integrated care for adults with chronic pain. Behavioural pain treatment, delivered through a stepped approach, is at the centre of the newly expanded program's model of care, coordinated with medical interventions. The pain psychologists on the team have an essential role providing assessment, class/group/individual therapies, as well as program development and evaluation.

Transplant Psychologist

The **Transplant Manitoba** teams are dedicated to excellence and innovation in perioperative transplant services. The psychologist, as part of the large organ transplant teams, will work with patients and living donors to provide pre-operative evaluation, readiness preparation, and post-transplant follow up to optimize transplant outcomes; includes assessment, treatment; opportunity for program development.

Child Specialty Assessment – Developmental Disorders (preschool) and/or FASD (school age) (2 positions)

Based at **Specialized Services for Children and Youth (SSCY)**, the Psychologists are part of interprofessional teams inclusive of developmental pediatricians, nurses, and allied health. The psychologists will provide comprehensive and brief assessment, as well as consultation to the teams and families, with opportunity for clinical program development.

Child Specialty Consult/Intervention – Diabetes and/or Transgender Health (2 positions)

The compassionate, interprofessional teams of pediatric endocrinologists, nurses, psychologists and allied health staff work with children and families to support transgender health (**GDAAY clinic** - Gender Diversity and Affirming Action for Youth) and to optimize diabetes management (**DERCA clinic**- Diabetes Education Resource for Children and Adolescents). Based at the Health Sciences Centre campus, the psychologists will provide assessment, treatment, and consultation to improve and care and outcomes.
